

GOING SOLAR? GO WITH REC

- Secure investment with a global, bankable manufacturer
- Energy production that will pay for itself
- Ideal for residential and commercial installations
- Reliability of a strong and experienced brand

**ROBUST AND
DURABLE DESIGN**

**OPTIMIZED FOR ALL
SUNLIGHT CONDITIONS**

**MORE POWER
PER M²**

CHOOSE A RELIABLE SUPPLIER FOR A SECURE INVESTMENT

REC – a global leader

REC is a leading global provider of solar energy solutions with more than 15 years of experience, demonstrating that REC is a long-term player in the solar industry.

Founded in 1996, REC is headquartered in Norway and employs more than 1,600 people worldwide with offices, representatives and partnerships in place to help meet the world's growing energy needs.

REC solar panels are installed for various applications in Europe, USA, Australia, Thailand, Japan, India, and locations in between. At the end of 2013, REC had produced 12 million solar panels, amounting to more than 3,000 MW of clean, green energy.

Quality beyond expectations

REC products and production processes are certified according to multiple global and regional industry standards, consistently performing well in certification tests.

REC's internal testing and qualification processes are twice as stringent as those of IEC (International Electrotechnical Commission), which are considered industry standards. This extreme testing ensures panels can perform in the most severe environments, ensuring increased reliability. As a result, REC solar panels are widely recognized for setting new industry benchmarks for high product quality.

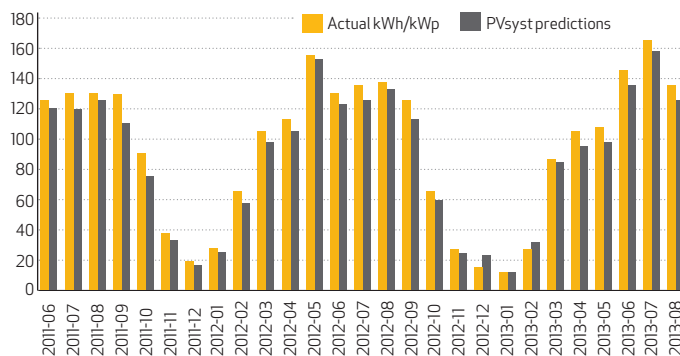

REC's internal quality tests are twice as stringent as industry standards

Example of an over-performing installation

Location: Germany
System size: 5.7 MW
Orientation: South
Tilt: 25°

Over performance vs. high performance

Most solar panels on the market are advertised as "high performance". REC solar panels, however, consistently over perform – i.e. produce more electricity than predicted by sophisticated simulation software. As a result, owners of installations with REC solar panels always get more: more yield, which translates to more savings, greater return on investment, and increased profitability.

Monthly kWh/kWp comparison: Actual REC performance Vs. PVsyst software predictions

CHOOSE PROVEN SOLAR PANELS TO DELIVER REAL RETURNS

In perspective:

Fewer than 300 from approximately 3 million REC solar panels manufactured each year come back from the field with claims.

Low claims, high security

The high quality of REC solar panels is further supported by the very low claims rate. REC's automated production is state of the art, comparable to automotive industry standards. The high level of automation ensures consistent high quality output.

To put this in perspective, out of approximately 3 million solar panels manufactured on a yearly basis, less than 300 return to REC from the field.

A protected investment

REC solar panels come standard with comprehensive product and power output warranties. The 25-year linear power output warranty ensures that REC solar panels will perform exactly as they are expected to – every year for 25 years. In addition, the solar panels come with a product warranty for ten full years. Together, the warranties provide value-adding security you can depend on.

The promise of linear power output combined with high product quality provide greater ROI predictability and enable you to best plan your investment. With REC's warranties, you gain:

- Greater return on investment predictability
- Increased investment security
- Guaranteed high product quality

Attractiveness of self consumption solar:

- Declining investment costs
- Stable electricity output
- Environmentally friendly
- Significant bills savings
- Quicker payback times

Using solar for self consumption

With declining investment costs, stable electricity output and quicker payback times, producing solar electricity for the purpose of self consumption is growing in popularity, contributing to the financial gains and energy independence of families and businesses.

REC is a thought leader on self consumption, having conducted an in-depth study on the topic. Also, REC solar panels are used in many high-profile self-consumption installations.

Heineken Wierckse Brewery - 921kW - 855,000kWh/year - 3,683 REC Solar Panels - Den Bosch, Netherlands

CHOOSE A STRONG BRAND WITH STRONG VALUES

Strong brand with strong values

REC is a respected brand in the global solar industry with a focus on partnership – with a demonstrated commitment to project developers, distributors, installers, and end customers. This approach directly supports REC's vision:
We want every person to benefit from electricity directly from the sun.

This mentality is lived by REC's four values:

- We are Responsible
- We are Experienced
- We are Collaborative
- We are Straightforward

REC's solar panel production in Singapore received a Solar Industry Award for Module Manufacturing Innovation.

Award-winning production

In today's competitive solar market with import duties on some products, it's important to know where solar panels come from. REC solar panels are produced at a world-class facility in Singapore, which is certified to the highest health, safety, and environmental standards. Output steadily increases to meet the growing demand for REC solar panels.

- Best Company for Sustainability; Solar Energy Solutions Global

2011 FROST & SULLIVAN BEST PRACTICES AWARD

- Global solar power Customer Value Enhancement Award

2010 SOLAR INDUSTRY AWARD

- Module Manufacturing Innovation

REAL LIFE, REAL SATISFACTION: MEET THE SAUTER FAMILY

"A rooftop solar plant stood out as the most attractive investment alternative. The installer left us in no doubt that REC solar panels would maximize the value of the investment.

REC's reputation and heritage as a top-tier global player added confidence that REC was the best choice."

- Heike and Gerhard Sauter
